

SecureSMART

*Block Email Threats Before They Reach Your Network—
Make Downtime a Thing of the Past.*

Comprehensive and reliable email protection

SecureSMART protects your network from viruses, spam, advanced email threats and accidental or malicious data leakage via email, in the office or on the road, no matter the device.

Our multi-layered security keeps you safe from known and emerging email-based threats, using a combination of custom filters and industry-leading anti-virus, anti-spam and anti-phishing engines. With advanced threat protection as part of our standard package through our custom policies, less than 0.003% false positives and a service availability of 100%, we know SecureSMART is what you need to protect your business and reduce time spent on IT administration.

Email continuity - URL protection - Image Analysis - Extended Message Logs

With a number of optional add-ons available, SecureSMART can be customised to your organisation's specific needs - reducing IT administration and strengthening your network's protection.

ClickSMART
URL Protection

ExchangeSMART
Hosted Exchange

WebSMART
Web Filtering

SecureSMART Suite

An email outage can wreak havoc upon your business. Our **SecureSMART Suite** email continuity solution will ensure that your company's email stays operational. Users can log in to a browser-based portal from anywhere in the world and continue to send and receive emails from any device with an internet connection, even if your primary email systems are unavailable. Upgrading to SecureSMART Suite also brings with it 90-days of email replay, instead of the standard 14.

Reporting: Real time monitoring

Our industry-leading reporting system monitors the status of inbound and outbound email messages and can provide quarantine summaries on an hourly, daily, or weekly basis, as specified by your administrator. You can view and schedule reports showing the total amount of emails blocked by domain, as well as top senders and recipients.

ClickSMART

ClickSMART is our **new** URL protection service. It provides yet another level of defence against phishing and ransomware attacks by preventing email recipients clicking on dangerous URLs. By rewriting the URLs present in emails when they reach the FuseMail cloud, ClickSMART enables the links to be rescanned at the time of the click. Users are then blocked from dangerous sites.

ClickSMART is an add-on feature to FuseMail's SecureSMART email security service.

FuseMail® the perfect supplement for Office 365

The proliferation of Office 365 does bring up the question of how safe and secure the system is. Why even run the risk? Use SecureSMART to enhance the power of Office 365 even further and keep your business free from email threats.

Why You Need SecureSMART

Platform independent, works with any email client or server - Microsoft Outlook, Lotus Notes, Office 365 and Google Apps.

Multiple levels of spam, virus and phishing protection.

Import old allow and deny lists from your old system using CSV - reduce unnecessary administration during set-up.

As much or as little end user control over email as you choose.

Large file handling – allows an email over the file size limit through to the end user without the attachment, the end user then decides if they want to download it from the cloud.

Add ClickSMART to your email security package to benefit from URL protection.

Over 99.9% of spam identified and quarantined – reduces wasted staff time and improves productivity.

Fully supported by an award winning UK-based team.

Prevent data leakage (customer data, sensitive business information) through the use of multi-level account rules.

Set up rules to govern domains, groups or individual policies.

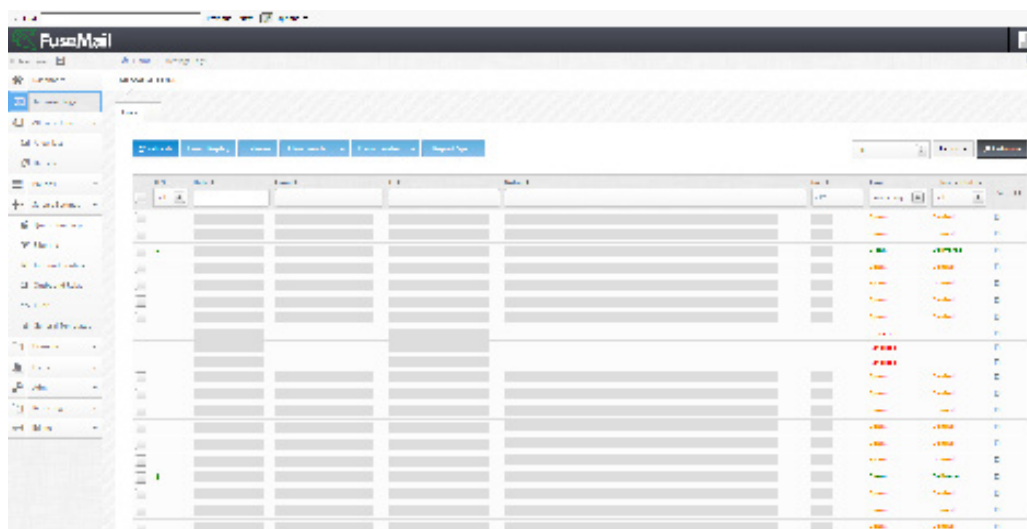

Customisable portal branding to ensure employee confidence in the system.

Add image analysis to your SecureSMART package to further secure your network.

FuseMail Email Logs

Our partners tell us they are the best on the market; easy to use without compromising on functionality. All emails are available instantly meaning you can track, trace and take action in real time. Use them to check what has happened to every email your organisation has sent or received over the last 90 days. Go back and check quarantined messages from up to 90 days ago and preview them in your browser. Use the FuseMail Portal to see all types of email including spam, virus, clean in one search view. We can now offer **extended message logs** for 1, 3 and 10 years, enabling you to preserve traceability for longer. (Please note extended message logs does not increase message replay duration)
