

docQsuite

Print Room Integration for Pcounter

docQsuite is the leading print room and reprographics management application that works alongside and complements the functionality of Pcounter.

docQticket and docQmanager can work either as a standalone solution or together as an integrated package to provide online submission of job tickets, routing and redirection of output and sophisticated queue management and job splitting capabilities. All transactions can be logged via Pcounter's standard accounting process to enable centralisation of accounting and reporting.

KEY BENEFITS

- Dramatically improves print room efficiency
- Enhanced user service - safe, consistent results
- Reduces costs, increases staff productivity and improves workflow
- Maximises use of multiple devices for large jobs
- Eliminates waste and duplication of work
- Accuracy assured
- Centralised accounting by user/cost centre
- Enhanced service = wider user acceptance
= greater volume via print room = lower cost per page produced.

docQmanager

The docQmanager module is a simple to use drag and drop print queue management system that gives print operators total control over print jobs from the network. Operators can copy, move, preview and reprint jobs by just using the mouse.

KEY FEATURES

- Increased efficiency: copy, move, reprint and view print jobs at speed
- Automatically split colour and black and white pages on different devices
- Print preview of output eliminates reflow problems and reprints
- Automatically batch and sort PDFs for faster printing and collating
- Split jobs across multiple clustered printers for load levelling and optimised throughput
- Archive documents for re-print or print on demand to reduce excess printing
- Simple drag and drop user functionality
- Jobs preview and re-print
- Customisable user interface to match operational needs
- Add on modules available to extend functionality

docQticket

Is a browser-based client application that enables electronic document submission. Documents can be transferred electronically to the print room/reprographics department. The documents arrive at the print centre in a print ready format together with all the information necessary to complete the finished document.

KEY FEATURES

- Improved accuracy – validated input removes human error & reduces waste
- Ticket receipt confirms details between end user & print room
- Saves time spent delivering hard copy documents by hand
- Reduces email traffic – files are no longer sent as attachments to the print room
- Audit trail for recharging purposes
- Customisable job ticket design
– features such as dynamic graphics & cost estimation are supported
- Local client print queue and server components
- The print room operator simply selects the relevant output device based on finishing capabilities or printer status
- No reflow of jobs
- Integrates with third party accounting systems

Take control with Pcounter.

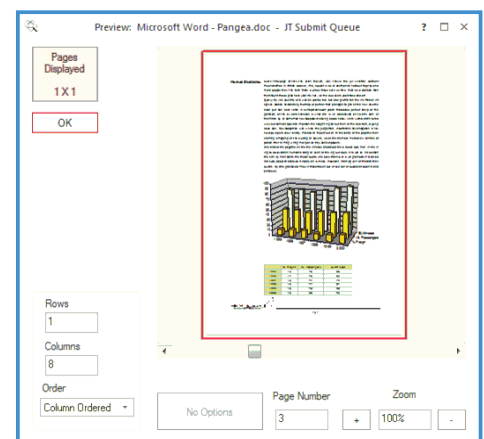

Scalable, network-based print management software for:

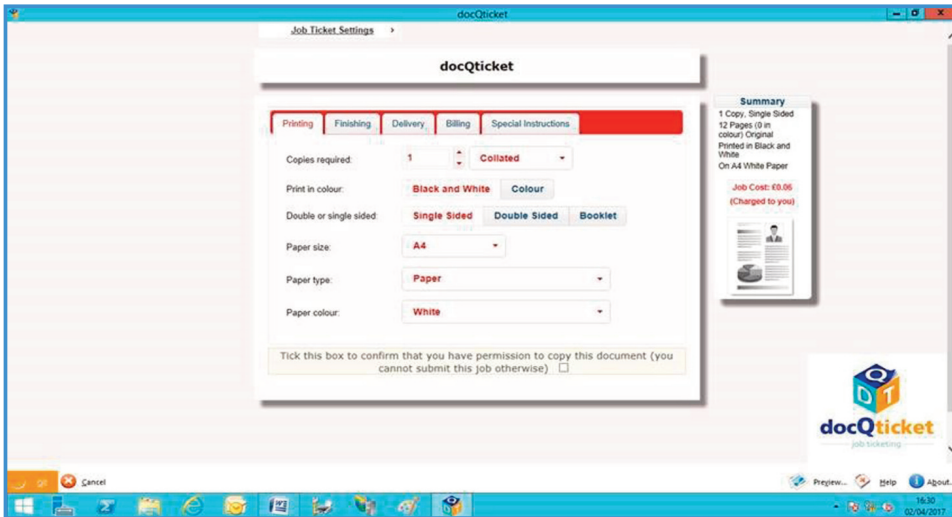

Education
Public Sector
Corporate
Finance
Professional

**Cut costs
Eradicate waste
Improve performance**

Solution modules
