

XPR Enterprise Point of Sale Requirements

OVERVIEW

XPR Enterprise POS is a simple software package which functions as a till system. It allows an operator to charge users for customisable products directly from their Pcounter account. These products can also be charged against Pcounter department or client codes and subsequently reported on using Pcounter's reporting tools.

There are a number of components necessary for XPR POS to correctly function, which all come with a 30 day fully functional free trial. Each download includes installation and configuration instructions for the specific product.

SERVER COMPONENTS

The following applications must be installed on a server. This can be your organisations' Pcounter server or a dedicated database/SQL server.

.NET Framework 3.51

This can be downloaded from Microsoft for Server 2003.

For Sever 2008 this is included upon installation of the Application Server role.

XPR Enterprise Database Wizard

<http://www.icssoftware.co.uk/Processes/Redirect.aspx?value=XPR%20Enterprise%20Database%20Wizard%2064-bit> – x64 version.

<http://www.icssoftware.co.uk/Processes/Redirect.aspx?value=XPR%20Enterprise%20Database%20Wizard%2032-bit> – x32 version.

XPR Enterprise Communication service
